Content:

Dr. James Hansen, author of global warming and climate change, keeps on warning, hammering on global warming and climate change.

The truth is: We can never solve global warming and climate change without solving overpopulation. These three are interconnected and inseparable.

The time to remedy has passed already, the only thing we have to do is maintain what is left of us.

Didn't Jesus Christ say something like this: The time will come when brothers will fight against brothers, sisters against sisters, etc.?

The time is here. Global warming and climate change will take several decades to address but of the three, overpopulation is more controllable because it involves human beings.

Strange, the United Nations and the rest of the world cannot get the message that overpopulation is more critical. Once we control overpopulation, global warming and climate change will just follow.
