MANILA, Philippines — The Philippines ranks fifth in the top five countries fighting climate change, according to global research conducted by Kalon Surf, a luxury surf resort in Costa Rica.

On top of the list is Costa Rica, followed by Morocco, Portugal, and the United Kingdom.

In the bottom five of the list are the United States, Australia, South Africa, Indonesia, and Ireland.

“In 2018, the Philippines pledged to reduce its carbon emissions by 70 percent by 2030. The country, with a population of 104 million residents, intends to reduce carbon emissions from its energy, transport, waste, forestry, and industry sectors. As a surfing hotspot, these changes can help preserve the Philippines’ beaches and reduce pollution,” Kalon Surf noted.

Other information regarding the Philippines that were noted in the research include the following:

Kalon Surf conducted the research by compiling a list of countries that are well-known for their surfing beaches and compared their rankings on the Climate Change Performance Index and Climate Action Tracker.

Researchers also examined data on renewable energy, Paris Act compliance, and other energy initiatives in each country.
